Wesley Shih
Jeffrey Hui
Jordan Mo
Mark Ramalingam

Introduction

We wanted to provide a platform that allows students (or anyone!) to find other people to split the cost of monthly subscription fees. We want to allow groups to split the cost for services like Netflix, Chegg, Hulu, Apple Music and etc.

Goals

Goals Achieved:

- Platform to help people find others to split cost of subscriptions
- Easy to use interface
- Each user has personal account
- Ways to leave reviews for groups

Goals Didn’t Achieved:

- Payments
- Ratings for each person and group

Challenges and accomplishments

Accomplishments:

- Created a functional web app that does what we set out to do.

- Crash coursing a bunch of technical skills, routing with Express, manipulating data with MongoDB, exploring node modules.
- Gained teamwork skills and saw our app come together!

Challenges:

- Learning Node and the Express framework, etc other technologies.
- Balancing time management amongst outside work and activities

Project Management

- Github
- Messenger (for communication)
- Trello (SCRUM board)

Development

- C9 IDE
- MongoDB
- Express(routing)
- Node.js
- Passport js for local login and authentication
- HTML3/CSS5

Project management techniques

- SCRUM meetings 3 days a week (MWF)
- Planning poker
- Trello for scrum board
- Fridays were for asking questions, going over new concepts + design ideas or new features we should develop.

Things We Enjoyed

- Learning ~~struggling~~ Web Development
- Learned techniques for team management
- Watching our project come together!

Things We Didn’t Enjoy

- Scheduling meetings that fit everyone’s times
- Balancing having other projects + other course loads

Lessons learned

What Worked:

- SCRUM meetings were efficient
- We were all open to changes

What Didn’t Work:

- Estimation on time to complete tasks

Things We Should’ve Done:

- Allocate more time to complete tasks
- More code walkthroughs

Thank you!
