

Sprint 3 Report
Subscription Splitter
March 4, 2018

Actions to stop doing:

We need to stop copying and pasting code from one file to another without stating the purpose of the move. Some of us got confused to why a piece of code were copied to another file. We need to prevent this confusion. We will prevent this problem by leaving a comment to where certain pieces of code came from and why it is placed there.

Actions to start doing:

We need to start integrating the work we have done locally into our remote cloud platform so that each member can have the latest version of the code. Since next week is the last sprint, we will need to do the finishing touches so it's important to have the latest version.

Actions to keep doing:

We started to divide huge tasks that take up a lot of time into smaller tasks to prevent any member to dealing with hard and long tasks. Instead of having one member dealing with a task that might take 10 hours, we broke it down into smaller tasks that could take 1 to 3 hours instead and then each member choose the new tasks to do. We came to a conclusion that by doing this switch, we were able to finish harder tasks on time.

Work Completed:

- Set up MongoDB database
- Integrate Firebase with MongoDB
- Add comments to posting
- Display subscription plans

Work Incomplete:

- Fix UI for new routing pages

Work completion rate:

4 out of 5 completed. 75% completion rate
