Actions to stop doing:

We need to stop coding without a guideline. We started adapting to the agile process, except we don't have a guideline for members to follow when we code. This problem might lead to confusion in what is happening in our code and we want to prevent that from happening.

Actions to start doing:

We need to start adapting to engineering practices, such as using the scrum board, following definition of done, and be on time for SCRUM meetings. We also need to have better time management because getting together for SCRUM meeting has been difficult.

Actions to keep doing:

We have been working well together for the first sprint. We should keep doing coding sessions after our SCRUM meeting. We were able to get more work done by staying longer together as a team.
